The chromium course is very informative!

“Thank you for the opportunity to express my appreciation for the Chromium Plating for Engineering Applications Course. I found it to be very informative.

Based on the intense attention level displayed by the entire class of attendees, I believe everyone got an enormous amount of useful information from this class.

—Jim Hankinson
KCH Services, Inc.

Thanks, Jim!
People like Jim Hankinson look to the AESF as the recognized leader in developing training courses specifically for the finishing industry. They know they can trust the AESF to have instructors who are the top experts in their fields. Attendees also appreciate the quality of the course materials, too, and use them later for handy reference on their jobs. The illustrations for AESF courses are reproduced in full color, and high-resolution computer projectors are used in the classroom. This allows the incorporation of videos and animations to get complicated points across and “bring the student into the shop.” The total experience is very close to “hands on.”

When’s the next Chromium Plating for Engineering Applications?
April 20–21, Osborn Convention Center, Jacksonville, FL. (The course will be held in conjunction with the Aerospace/ Airline Plating Forum & Exposition.)

Hotel Information
Hotel accommodations are not included with the course registration. Please make your own reservations directly with the hotel. Special note: Please be sure to make your hotel reservations at least a full 30 days before the course is scheduled to begin.

Jacksonville Hilton & Towers
1201 Riverplace Blvd., Jacksonville, FL 32207
