

Nickel-Chromium Focus

Presentation NC9

Chromium Alternatives

Jim Menturweck, Enthone-OMI, New Haven, CT

Legislation, concerns for the environmental and public opinion, among others, are all factors to which the metal finishing industry must respond. The industry must develop coatings that will continue to provide the functionality and value that original equipment manufacturers, designers and consumers have come to expect—and that meet the requirements of an increasingly environmentally aware public. Chromium plating will be reviewed as a base line process against which the alternatives may be measured. Various alternative coatings will be discussed, including operating parameters, composition and use.

Paper not available.
