#### **Bright Nickel Solution Maintenance & Purification**

*Gene Torcoletti, Atotech Canada Ltd, Burlington, Ontario, Canada  
& Dr. Donald Snyder, Atotech USA, Rock Hill, SC*

The new emphasis in nickel electroplating is in the maintenance of the plating bath at peak performance in relation to its physical properties and appearance of the deposit. This new technology can be used to maintain the bright nickel plating chemistry at a consistent high level and remove organic breakdown products simultaneously without performing activated carbon or hydrogen peroxide and activated carbon treatments. The equipment is designed for maintaining the additives at a controlled level and removing the undesired organics by using a special adsorption resin. The unit eliminates sludge waste normally associated with activated carbon treatments.
